Instructor Colt Steele

Projects

Bugger | Python, Django, Bootstrap 4 [Repo Link](#)

- ▶ Bugger is a project management system created as a personal project.
- ▶ Built to deepen my understanding of the Django MTV framework.
- ▶ Built a total of 10 views and 13 templates.
- ▶ Challenges came from implementing a customized version of Django's built-in user authentication.

Image Renamer | Python, TKinter [Release Link](#)

- ▶ Personal project started out of a need to rename a large set of image files rendered for a 3D Animation.
- ▶ Learned the basics of building a GUI application with TKinter.
- ▶ Currently supports only JPEG and PNG files but can be expanded to include many other image files.
- ▶ User inputs file directory, base file name, and counter number.

The Cool Blog | Python, Django [Release Link](#)

- ▶ Simple blog web app built with Python and Django, using SQLite3 as the database
- ▶ Created 4 views handling the index display, blog post details, creating a new post and editing an existing post.
- ▶ Implemented Django's default authentication system with a custom registration view.
- ▶ Frontend styled with Django-Bootstrap 4.
